 - 1.4 Secondary Sale or Dividend Recap (Private Equity) 3
- 2. Valuation Multiples at Exit 4**

1. Strategic Exit Opportunities & M&A Landscape

A core requirement for early investors is understanding the path to liquidity. ATLAS has multiple natural exit horizons within 3 to 6 years across four categories of strategic acquirer, each with documented precedent transactions and a clear strategic rationale for acquiring the Company.

Figure 1. Four exit categories available to ATLAS: financial institutions, incumbent OTAs, super-apps, and secondary / dividend recap.

1.1 Major Banking & Credit Card Issuers — Premium Lifestyle Acquisition

Target acquirers: American Express, Capital One, JPMorgan Chase. **Precedent transactions:** Capital One acquired Velocity Black (luxury concierge app) for \$297 million in 2023; JPMorgan Chase acquired Frosch Travel and The Infatuation to build out Chase Travel; American Express acquired Resy and PocketConcierge.

Strategic fit. Financial institutions spend \$300+ to acquire each credit card customer. Acquiring ATLAS gives them a proprietary, closed-loop booking engine that drives card loyalty, high interchange volume, and sticky annual subscription cash flow. The ATLAS member base is precisely the affluent, high-spend demographic that card issuers compete to retain.

1.2 The Incumbent OTAs — Defensive & Margin Expansion M&A

Target acquirers: Booking Holdings (P/E ~25x), Expedia Group, Trip.com Group. **Strategic fit.** Public OTAs spend billions on Google Search Ads to capture transactional one-off users. Acquiring ATLAS gives them an established subscription vehicle (SaaS recurring revenue) that retains the highest-spending 10% of travelers without Google Ad dependency. The recurring revenue stream also re-rates their public multiple from a transactional to a SaaS framework.

1.3 Fintech & Mobility Super-Apps

Target acquirers: Revolut (recently launched Revolut Stays), Uber (expanding into flights and trains), Hopper (valued at \$5B+). **Strategic fit.** These super-apps already have millions of debit/credit card users. Integrating ATLAS's 0% wholesale engine instantly turns their app into a high-yield travel subscription club without requiring them to negotiate their own bedbank supply contracts.

1.4 Secondary Sale or Dividend Recap (Private Equity)

Should a strategic acquisition not materialize, ATLAS's high-margin subscription cash flow makes it a natural candidate for a private-equity recapitalization or secondary sale at 10x–15x EBITDA. The recurring revenue profile and capital-light operating model are well-suited to PE buyout math.

2. Valuation Multiples at Exit

The table below models three exit scenarios — base-case M&A, growth-case fintech sale, and conservative PE dividend recap — with the corresponding investor return on a \$75,000 SAFE investment.

Scenario	Year	Paid Members	Net Revenue	EBITDA	Exit Multiple	Target Valuation	Investor Return (\$75k SAFE)
Base Case (M&A)	3	25,000	\$21.2M	\$13.1M	3.5x Revenue	\$74.2M	~42x Return
Growth Case (Fintech Sale)	4	60,000	\$51.0M	\$31.5M	12x EBITDA	\$378.0M	~215x Return
Conservative PE Dividend	5	100,000	\$85.0M	\$52.0M	8x EBITDA	\$416.0M	~237x Return

Methodology note. Return multiples assume the SAFE converts at the \$1.75M valuation cap and that no additional dilutive rounds occur between close and exit. In practice, follow-on financing will dilute early investor returns; the figures above represent unconstrained cap-based returns and should be modeled against specific follow-on assumptions during diligence.
